Profile

I'm a self-taught web developer with a passion for building custom applications using React and Next.js. I first started coding in high school with Java back in 2022, and while it was challenging at first, I quickly became hooked on the problem-solving process. That curiosity led me into web development, where I've grown my skills in JavaScript, React, and modern frameworks like Next.js.

Instead of just building small showcase projects, I wanted to create something meaningful something I could use, improve, and build upon long-term. That's how RenderMe was born: a web app that allows users to create and host their own CVs online. It's a project I'm proud of and continue to develop as both a personal tool and a platform for others.

While I may not have a formal CS degree, I make up for it with consistency, curiosity, and a real passion for learning. I'm focused on staying adaptable, growing with the tech landscape, and delivering work that brings real value.

Experience

Junior Web Developer

DBS Technology

Jan 2025 - Present

Currently employed at DBS, where I primarily develop WordPress websites and create corporate identities for small to medium-sized businesses. Although the role is outside of a custom environment, DBS has given me the freedom to grow beyond development actively participating in client meetings, improving my design skills, and gaining a solid understanding of business operations. This experience has helped me become more well-rounded, especially in meeting deadlines and delivering projects that align with client expectations.

Intern Web Developer

Waterfall digital

Jan 2024 - Jul 2024

During my matric year, I had the opportunity to assist the team at Waterfall Digital with their custom Next.js projects. This experience played a key role in shaping my career path, offering insight into the power of small, focused teams and what they can achieve. Waterfall Digital encouraged my growth by exposing me to real-world production environments and valuable development practices, particularly in building web applications and course platforms.
